Heartland Paver
INTERLOCKING PAVING STONES

The Heartland Paver is a single-sized system that has four unique slate topped patterns. These four patterns give the appearance of a thirteen-piece, random paver system. The Heartland Paver System is easy to install, due to its spacer design.

HEARTLAND PAVER INSTALLATION*
The Heartland paver incorporates a modern, wide-joint look. This new look features false joints which require a joint-stabilizing sealer, such as Seal n’ Lock™ Easy Seal Paver Sealer, to help prevent the migration of sand and weed growth. Please follow the Seal n’ Lock™ Easy Seal Paver Sealer manufacturer’s directions, as improper use may create an unfavorable appearance.

1. Excavate unsuitable, unstable or unconsolidated sub-grade material and compact the area, which has been cleared. Backfill and level with 3/4” road base, suitable for walkways and roadways (typically 3” - 6” for pedestrian walkways and 8” - 10” for driveway applications), or as otherwise directed by site engineer/architect/landscape architect.
2. Install edge restraint using concrete curb, concrete toe or edging.
3. Place bedding course of sharp, normal-weight screening or concrete sand to a uniform depth of approximately 1” leveled to grade.
4. Layout the desired location of your pavers with a string line or marking paint. Install Heartland Pavers hand tight, following your pattern and extending the pavers over your lines.
5. Following all manufacturer’s instructions, cut your pavers with a cutting tool. When cutting pavers, mark the line that you wish to cut and, using your desired cutting device, make a clean, vertical cut. Ensure the fit is accurate and tight. There are four methods to use when cutting your pavers, choose the method according to your skill and comfort level.
   1. Use a skill or rotary saw with a diamond blade
   2. Use a masonry or table saw
   3. Use a hammer and chisel
   4. Use a paver guillotine splitter.
6. Tamp pavers with mechanical vibrator, uniformly level, true to grade and free of movement. Textured pavers require a rubber pad for the vibrator, to reduce scuffing on the paver tops.
7. Fill voids in paver joints by sweeping dry, fine, sharp sand over pavers.
8. After sweeping the sand into the joints, tamp the pavers with a mechanical vibrator. This will settle sand down into the pavers. Textured pavers require a rubber pad for the vibrator, to reduce scuffing on the paver tops.
9. Sweep the sand one last time into the paver joints, filling any voids. After the sand has been swept into the pavers, remove any sand dust from the tops of the pavers by lightly blowing the tops using a leaf blower or an air hose.
10. Lock the paver joint sand into place by using a Joint Stabilizing Sealer, such as Seal n’ Lock™ Easy Seal Paver Sealer. Follow all manufacturer’s installation requirements on the containers. Sealing your pavers is imperative.

Printed colors shown in this brochure may vary from actual product colors. We recommend selecting colors from actual product samples.
